

DOOR HARDWARE

As part of Camden Group's ongoing improvement strategy, we have upgraded the hardware on our panel door range, ensuring customers receive a top-quality product with enhanced security and longer-lasting performance. Here are just some of the benefits over and above the previous door hardware...

PVD Gold and Chrome hardware. PVD gives a "shiny finish" (replacing the previous "dull-finish" hardware)

Sprung-lever handle ensures less mechanical usage of the lock - increasing the handle and lock's longevity

Cams and locking points are specifically positioned to suit UK & Ireland door sizes

The door components are salt-spray tested to 600 hours, outperforming most forms of stainless steel

Flag Hinges achieve PAS 23 & 24 Security Testing

The door lock and hinge has been tested to the equivalent of opening/closing the door 6 times everyday for 22 years

PVD Gold and Chrome are tested to 480/500 hours salt spray testing

3 hinges have a carrying capacity of 120kg (triple glazed sash weighs 80kg)

The new lock has been designed specifically for Camden Group, with no other like it available on the market
